

WEB PROGRAMMING – FINAL TERM PROJECT

REQUIREMENTS

Every project must be a REAL, FULLY FUNCTIONAL dynamic web application that solves a real-world problem for real users.

1. GitHub Requirement

- Push ALL Projects semester web programming project code to GitHub.
- Final project code must also be uploaded to GitHub.
- GitHub repository must contain complete source code and README file.

2. Real Functional Website Requirement

- Build a fully functional website.
- Simple static HTML/CSS websites will NOT be accepted.
- Your website must contain real working features and real functionality.

3. Main Focus of Evaluation

- Database integration
- Backend functionality
- Dynamic content
- Real user problem solving
- Authentication/Login system
- Hosting and deployment
- GitHub project management

4. Database Requirement (VERY IMPORTANT)

- Every project MUST use a database.
- Examples: MySQL, PostgreSQL, MongoDB, Firebase, SQLite.
- Database should store real application data such as users, products, bookings, reports, orders, messages, etc.

5. Frontend + Backend Requirement

- Frontend examples: HTML5, CSS3, JavaScript, React, Vue, Bootstrap, Tailwind.
- Backend examples: Node.js, Express.js, Django, Flask, Laravel, PHP.
- Frontend and backend must communicate dynamically.

6. Dynamic Features Requirement

- Login / Registration System
- Dashboard
- Search functionality

- CRUD operations
- Booking system
- File upload
- Notifications
- Real-time updates

7. Hosting & Deployment

- The project must be deployed online.
- You may use Netlify, Vercel, Render, Railway, Firebase Hosting, or similar platforms.
- If needed, buy a domain from Namecheap or GoDaddy.

8. Final Submission

- GitHub Repository Link
- Live Website Link
- Project Title
- Team Members
- Technology Stack
- Database Explanation
- Architecture Diagram
- Project Demo

9. Presentation Structure

- Introduction
- Problem Statement
- Target Users
- Framework Used
- Technologies Used
- Database Explanation
- Architecture Diagram
- Live Demo

10. Important Reminder

- No static website will be accepted.
- Your project must be dynamic, database-driven, fully functional, and deployed online.
- This is a REAL WEB APPLICATION project.

Reference from Shared Project Framework

The project requirements are based on the shared Web Programming Dynamic Web Project Framework document emphasizing dynamic applications, database integration, backend systems, architecture diagrams, and real-world problem solving.
