

IN CLASS PRACTICE PROJECT

HOW TO STORE CUSTOMER DATA IN A MYSQL DATABASE USING PHP

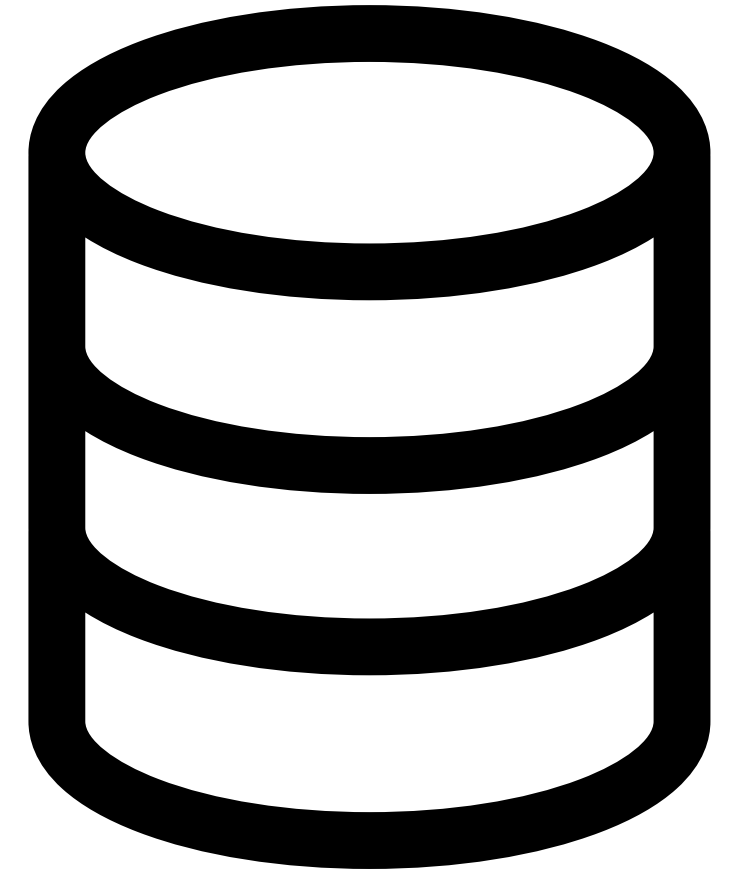

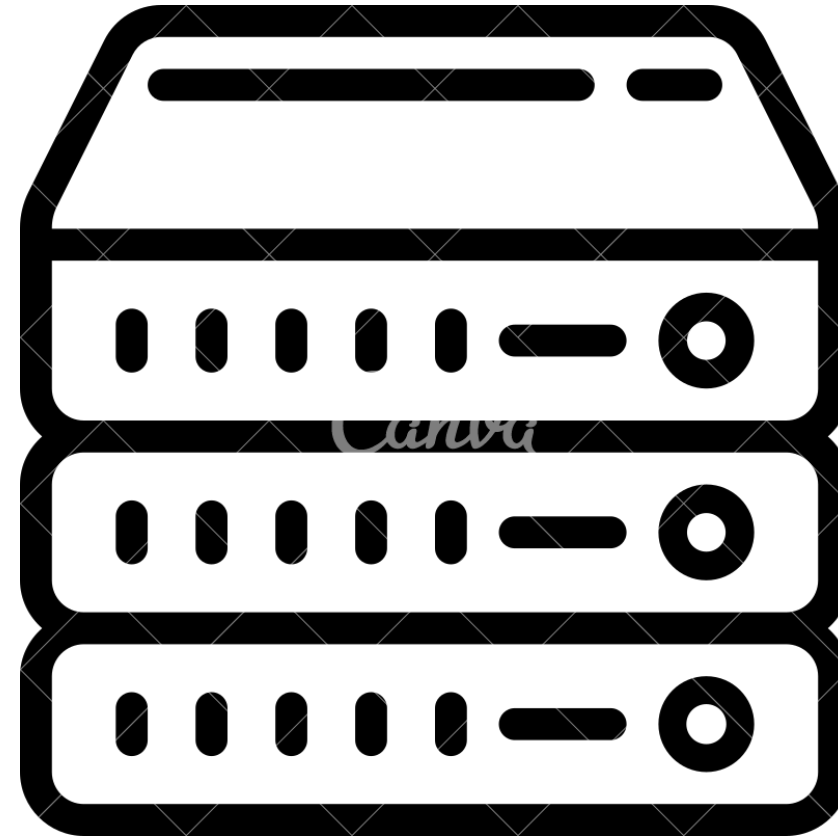

Objective:
Create a form to collect customer details and save them in a MySQL database using PHP.

ISTM : WEB BASED PROGRAMMING 113-2

BY: TAUHIR ALAM

STEP 1: Install XAMPP

✓ **XAMPP includes:**
Apache (Web Server)
MySQL (Database)
PHP (Scripting language)

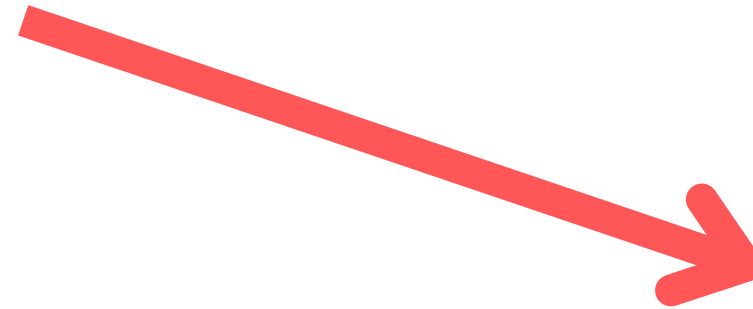

STEP 1.1: Download XAMPP for Windows or Mac

XAMPP

Go to:

<https://www.apachefriends.org>

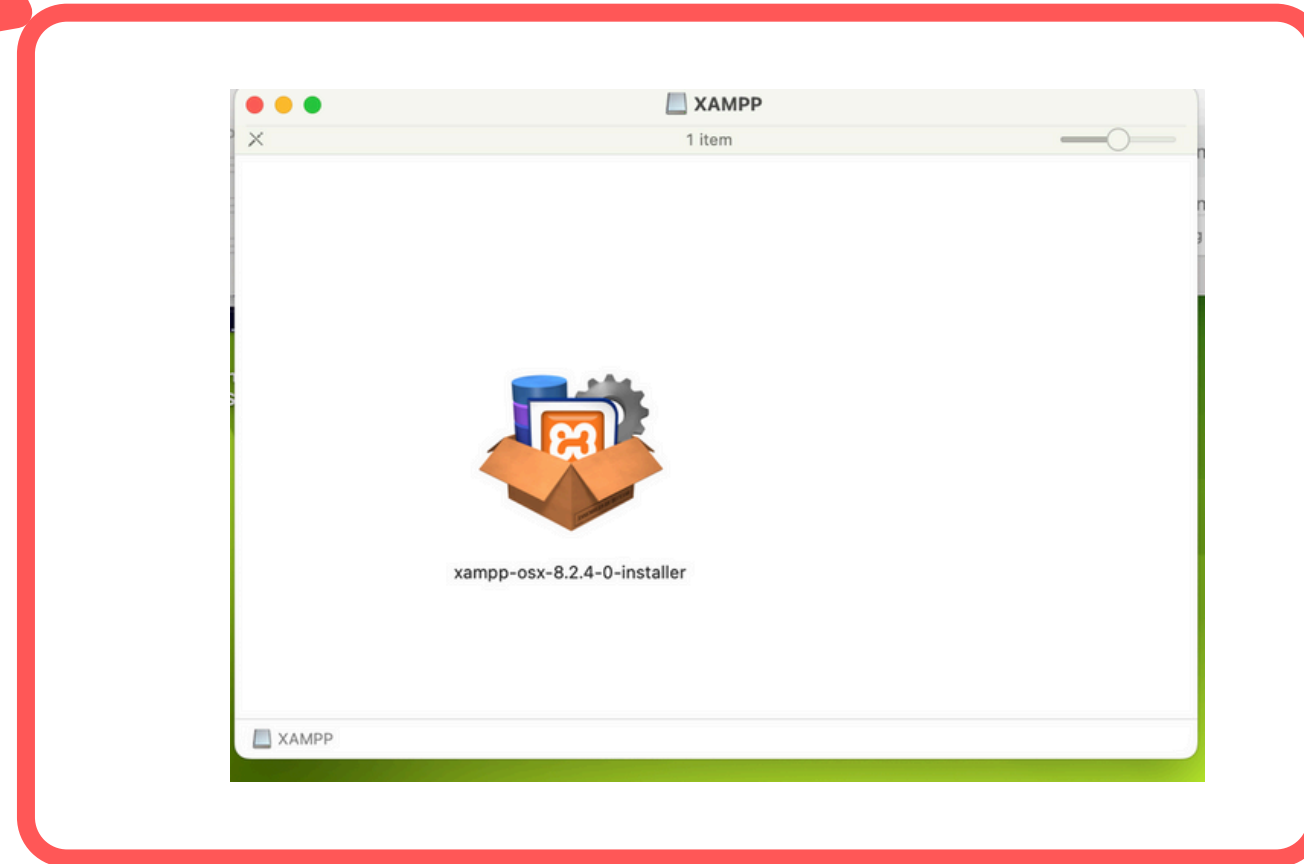

XAMPP Installers and Downloads for Apache Friends

XAMPP is an easy to install Apache distribution containing MariaDB, PHP and Perl.

 [apachefriends.org](https://www.apachefriends.org)

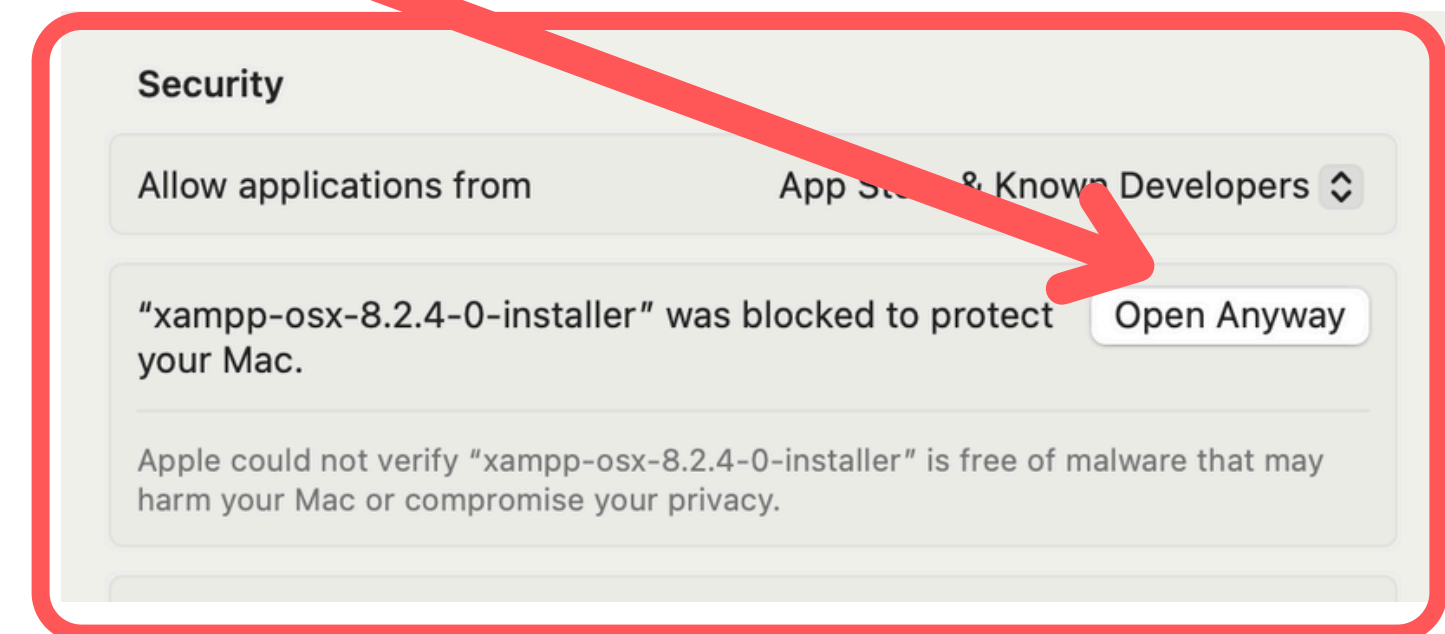

STEP 1.2 : Double Click

#Double click the downloaded file

STEP 1.3: Allow through Setting

If there this error screen pop up ---> go to your notebook setting -->privacy and security ---> Allow applications from ---> Click Anyway

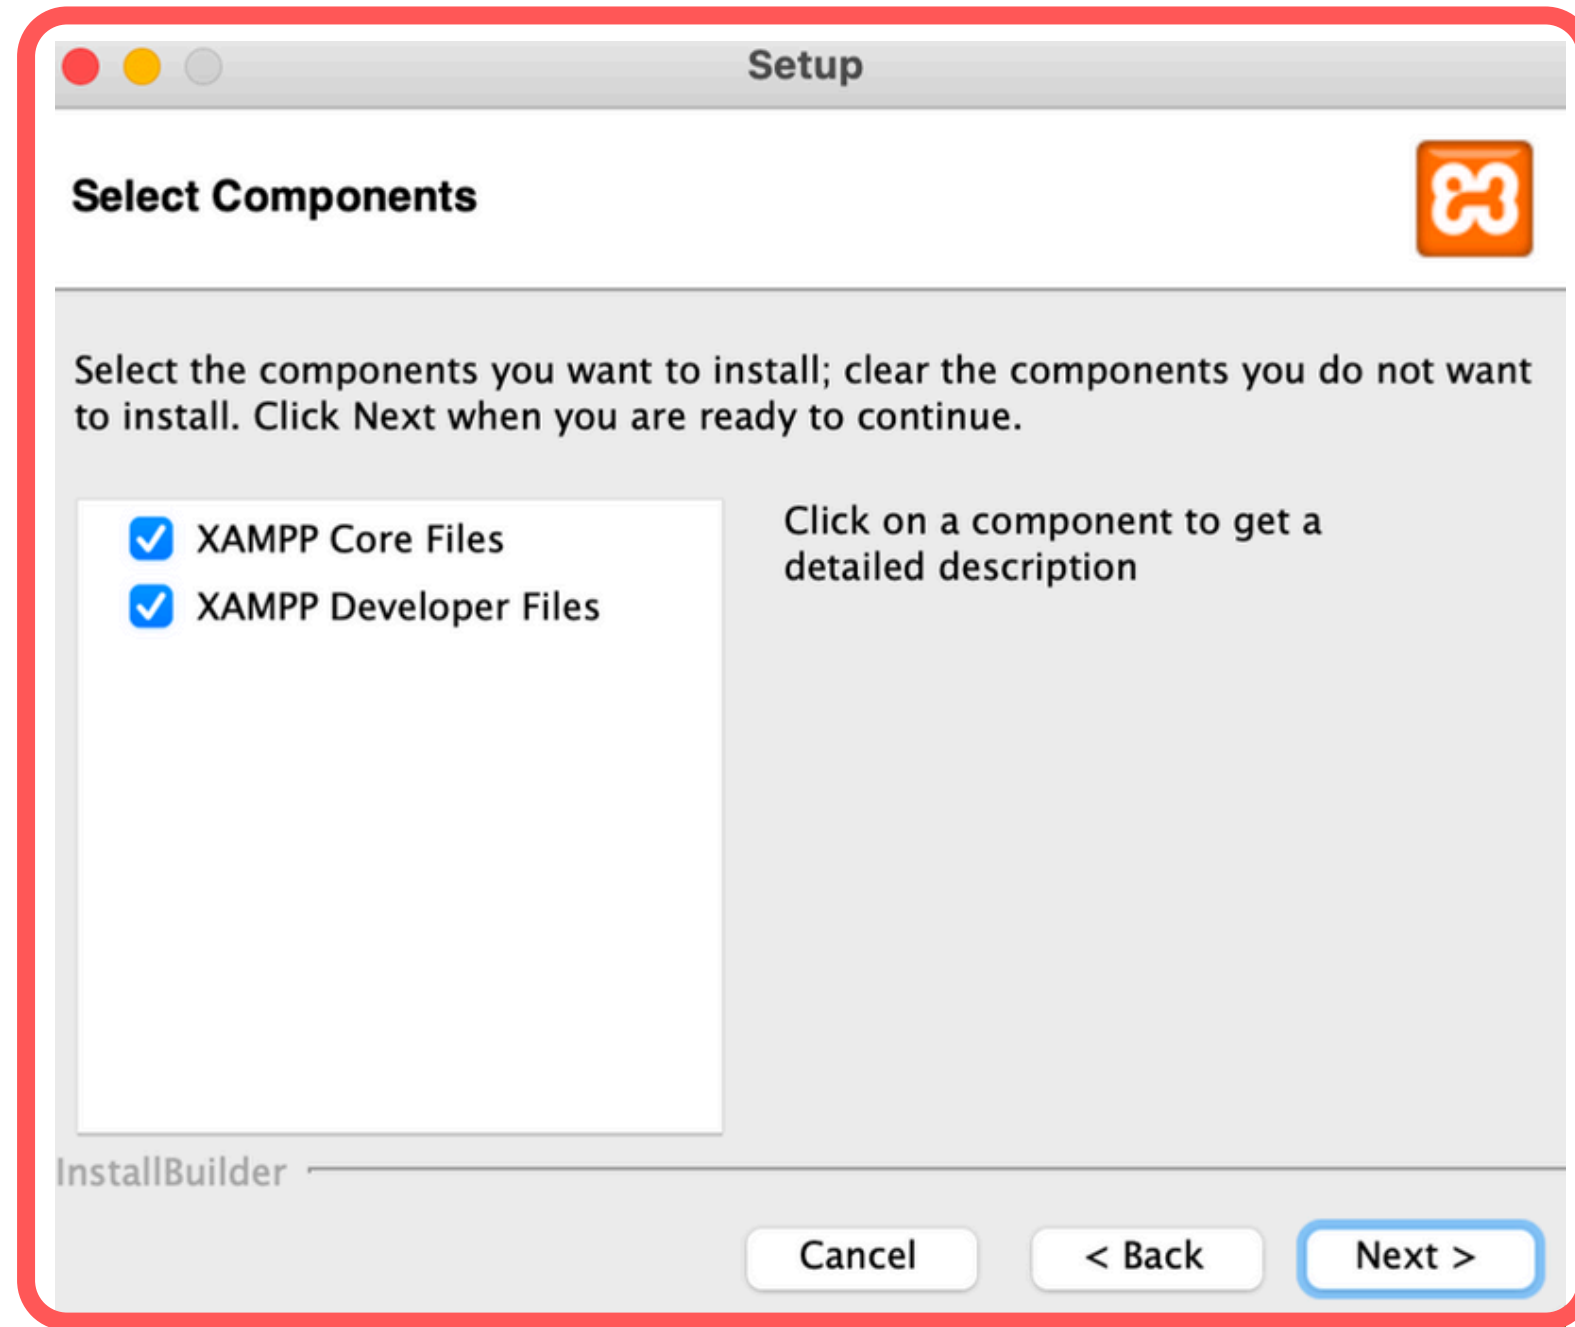

STEP 1.4: Open XAMPP

```
# Open XAMPP Control Panel-----> Start  
-----> Apache  
-----> MySQL
```

STEP 1.5: Check Option

Please Check both option

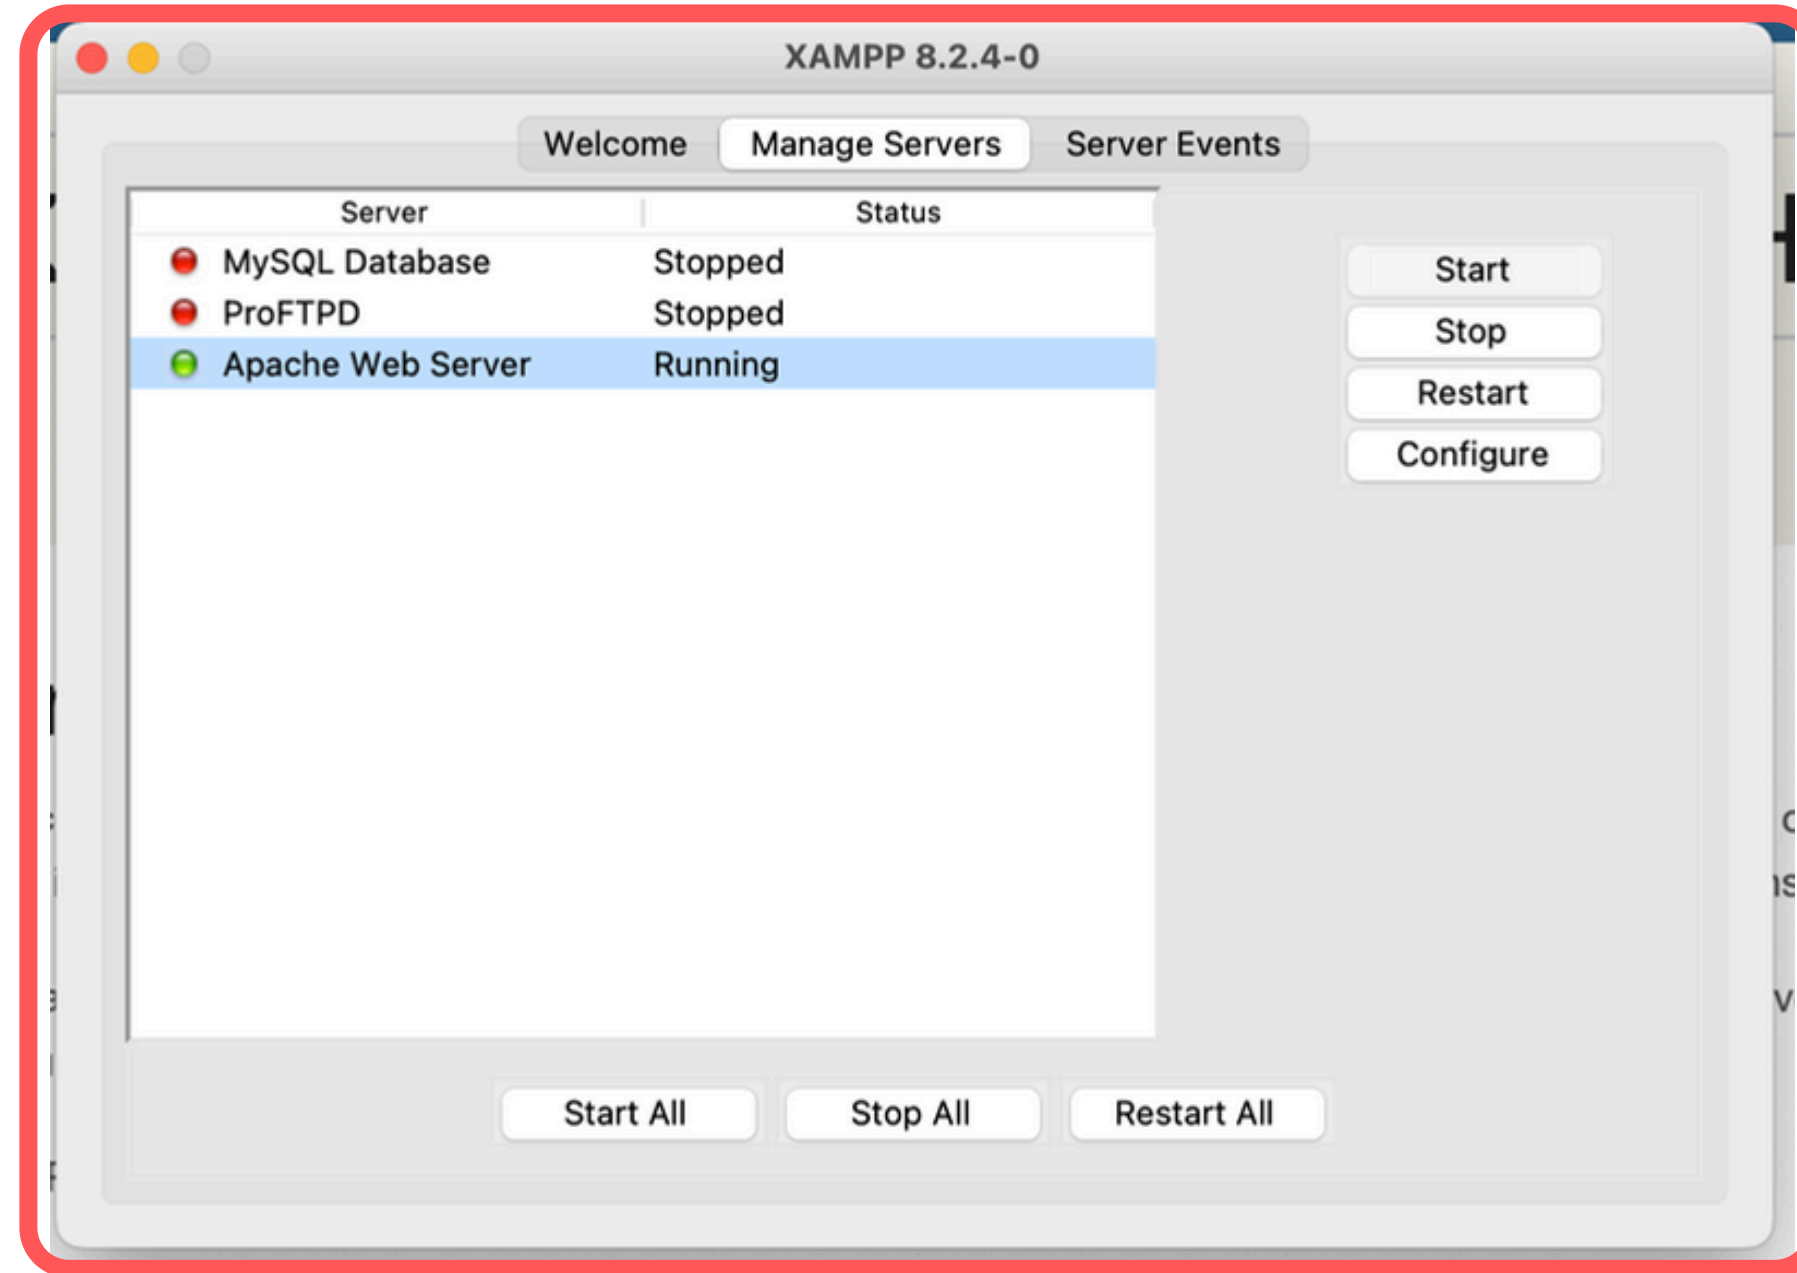

STEP 1.6: Manage Servers

Click on manage server

STEP 1.7: Start MySQL & Apache Web Server

Start MySQL & Apache Web Server

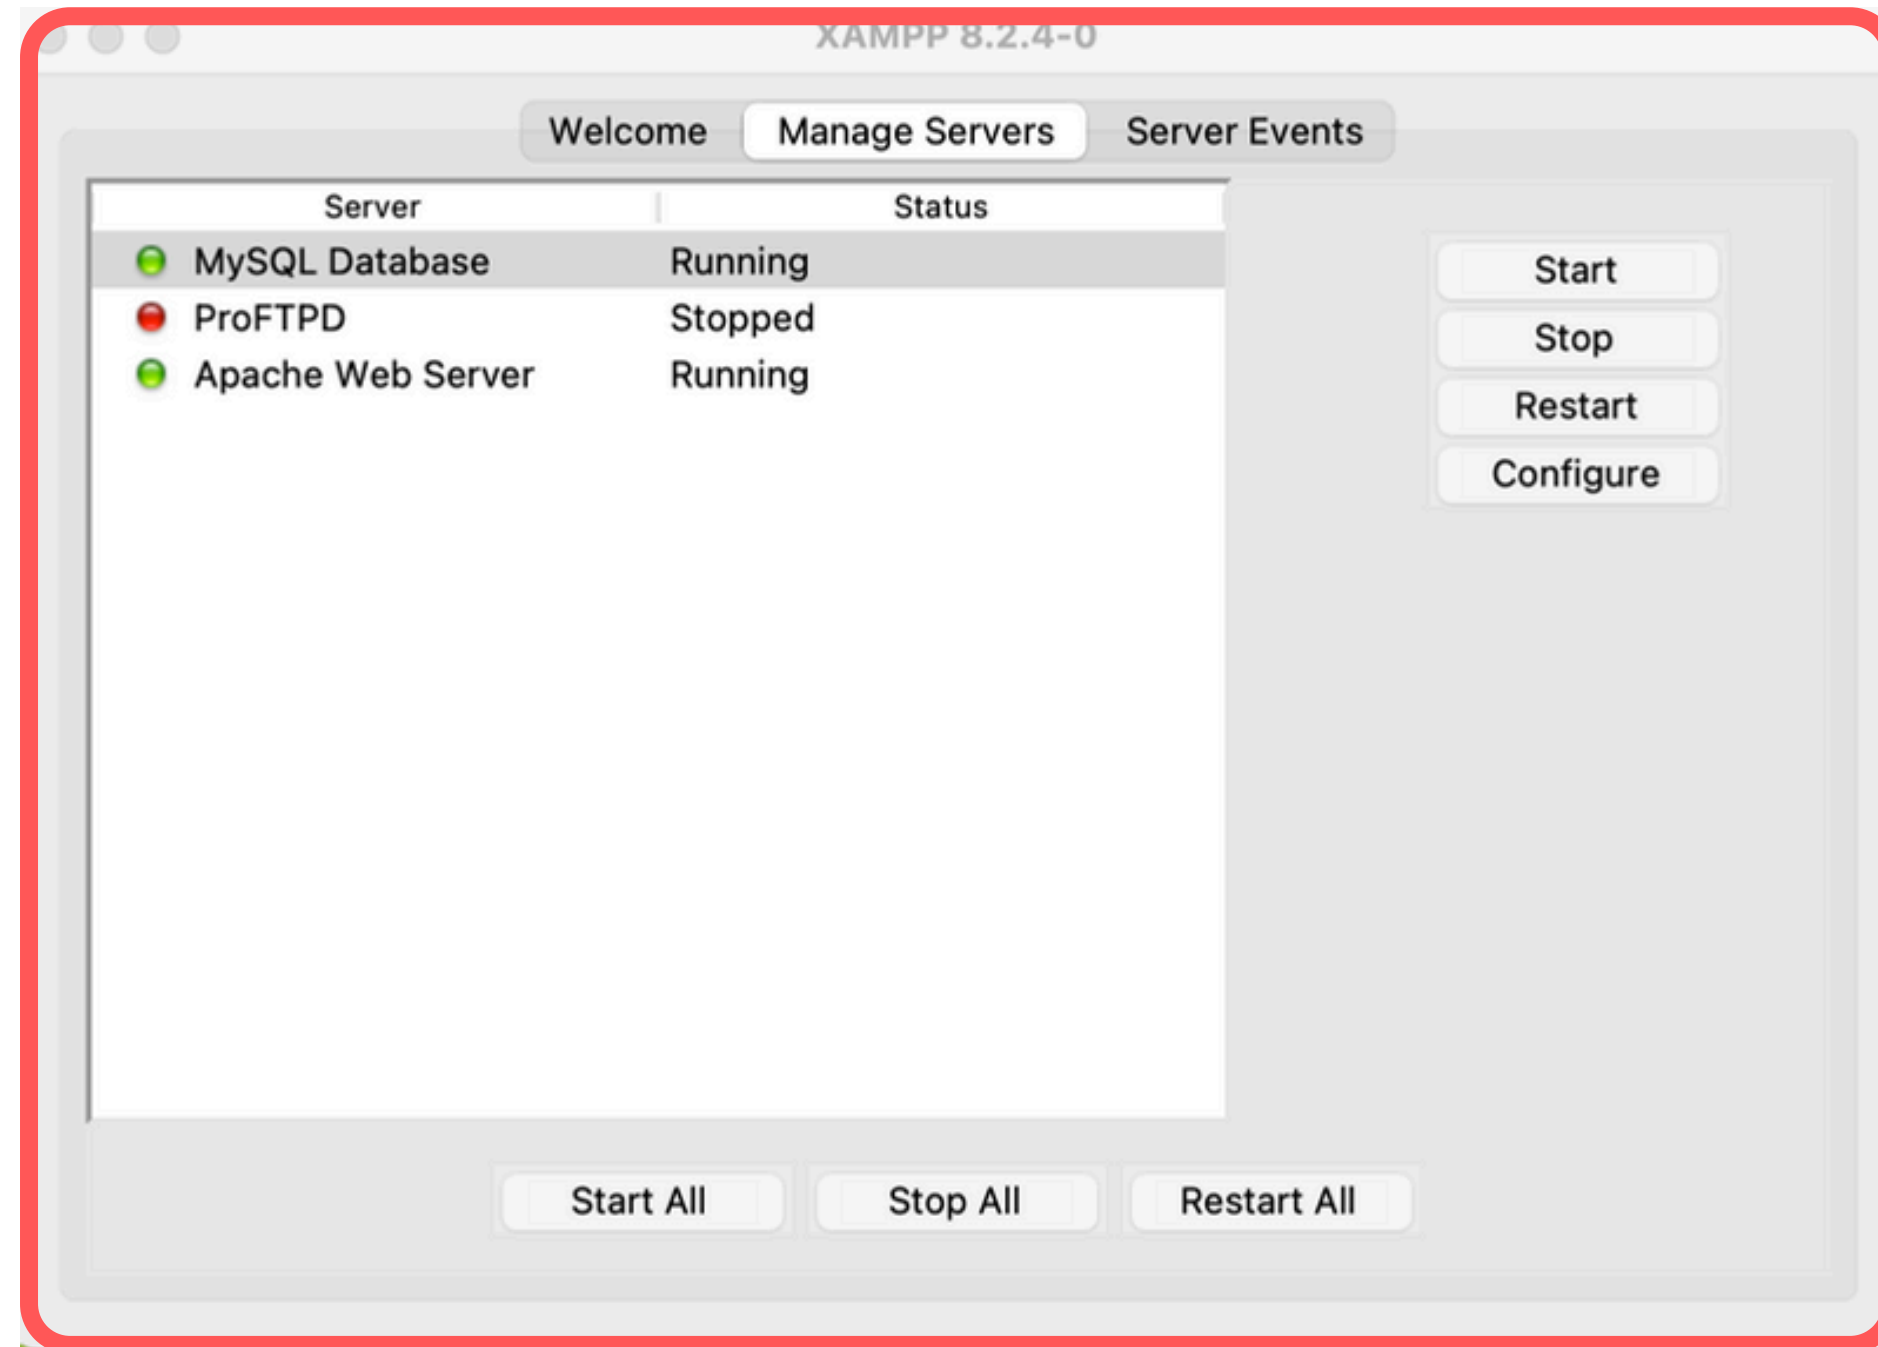

STEP 1.8: Change the Port

Change the port if unable to start MySQL Database---> Click Configure

Output

MySQL Database & Apache Web Server running

STEP 2: Create a Project Folder

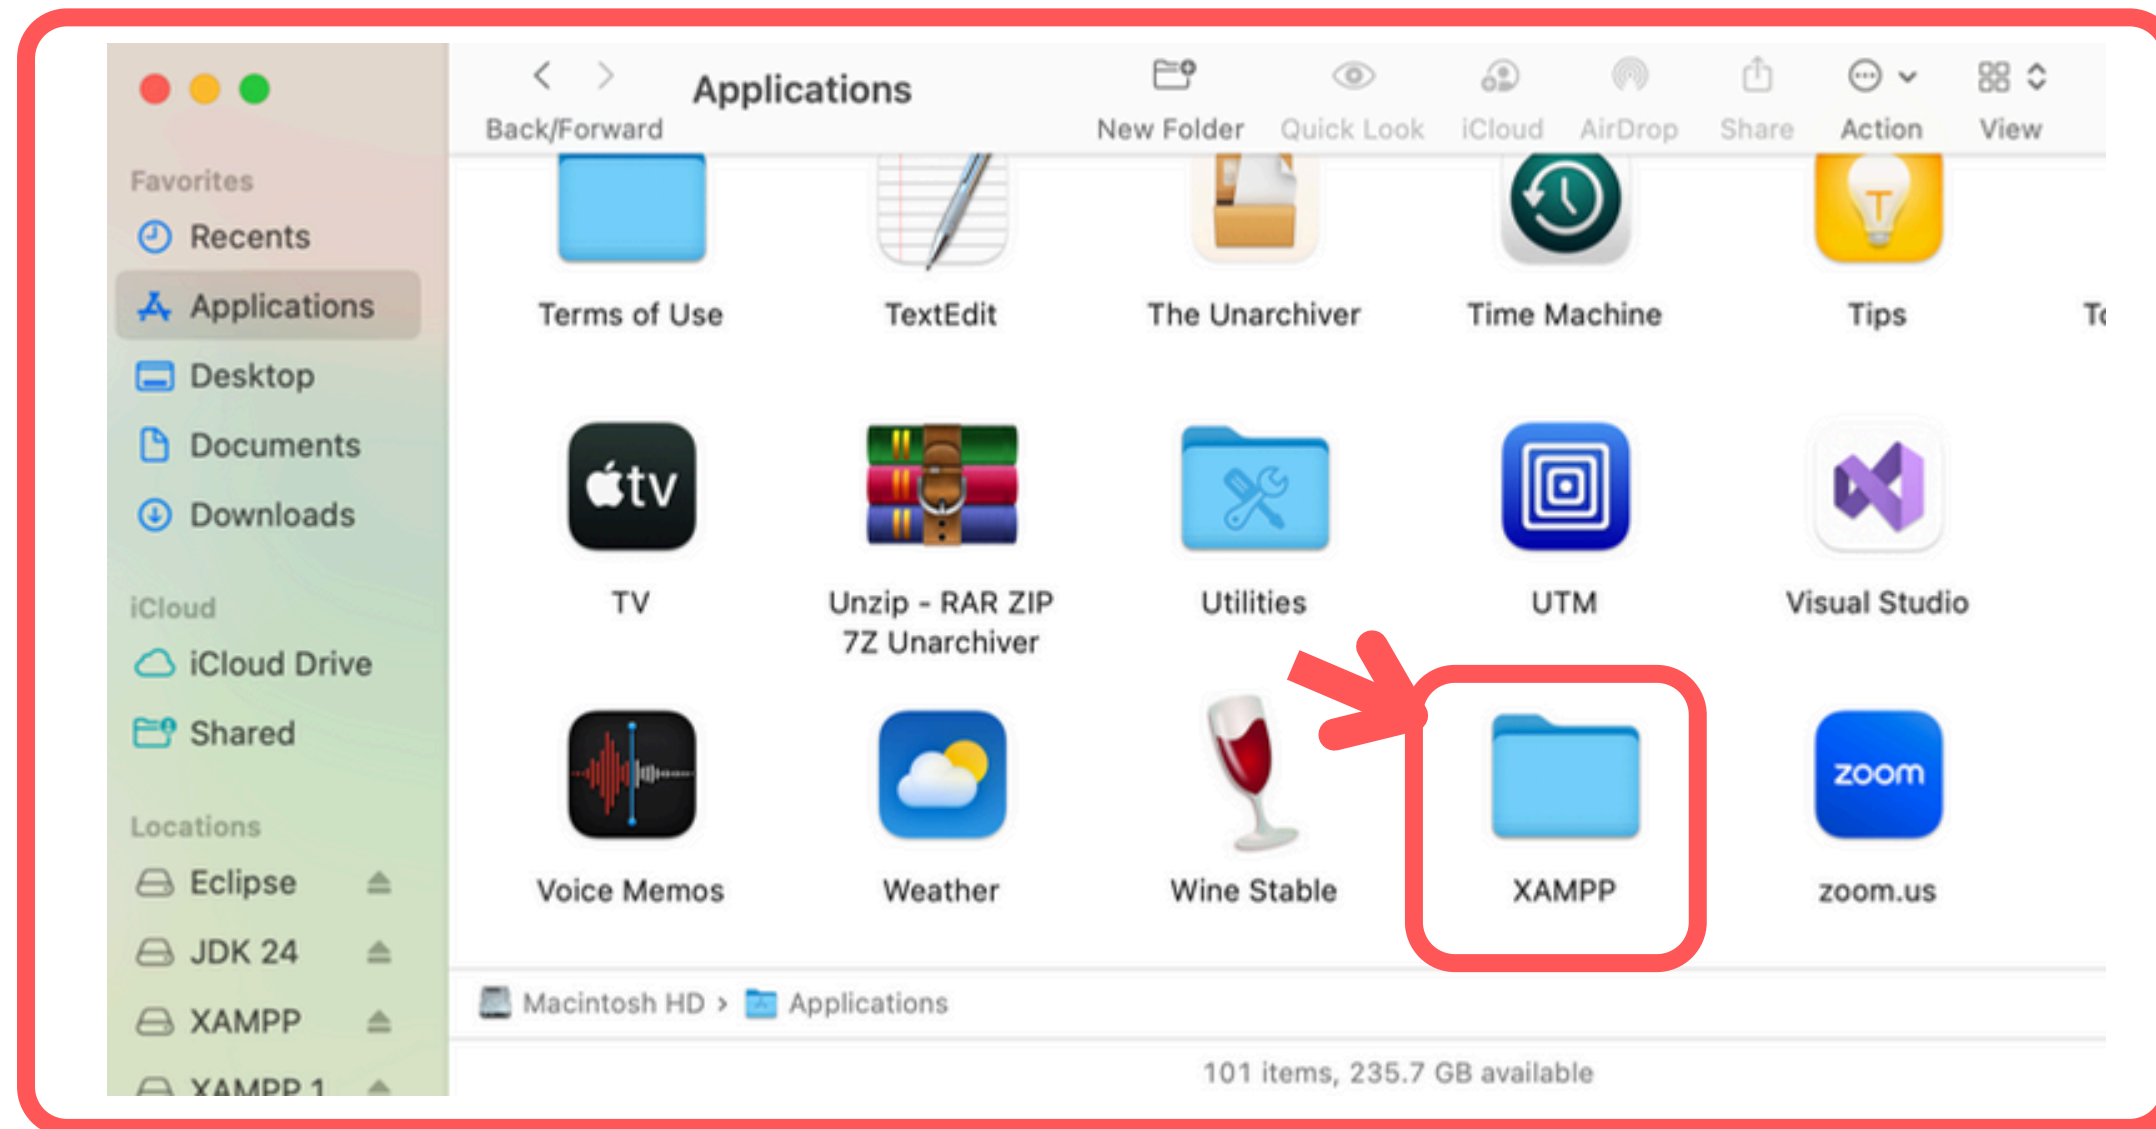

Go to this folder on your computer:

Windows: -----> C:\xampp\htdocs\

Mac: -----> /Applications/XAMPP/htdocs/

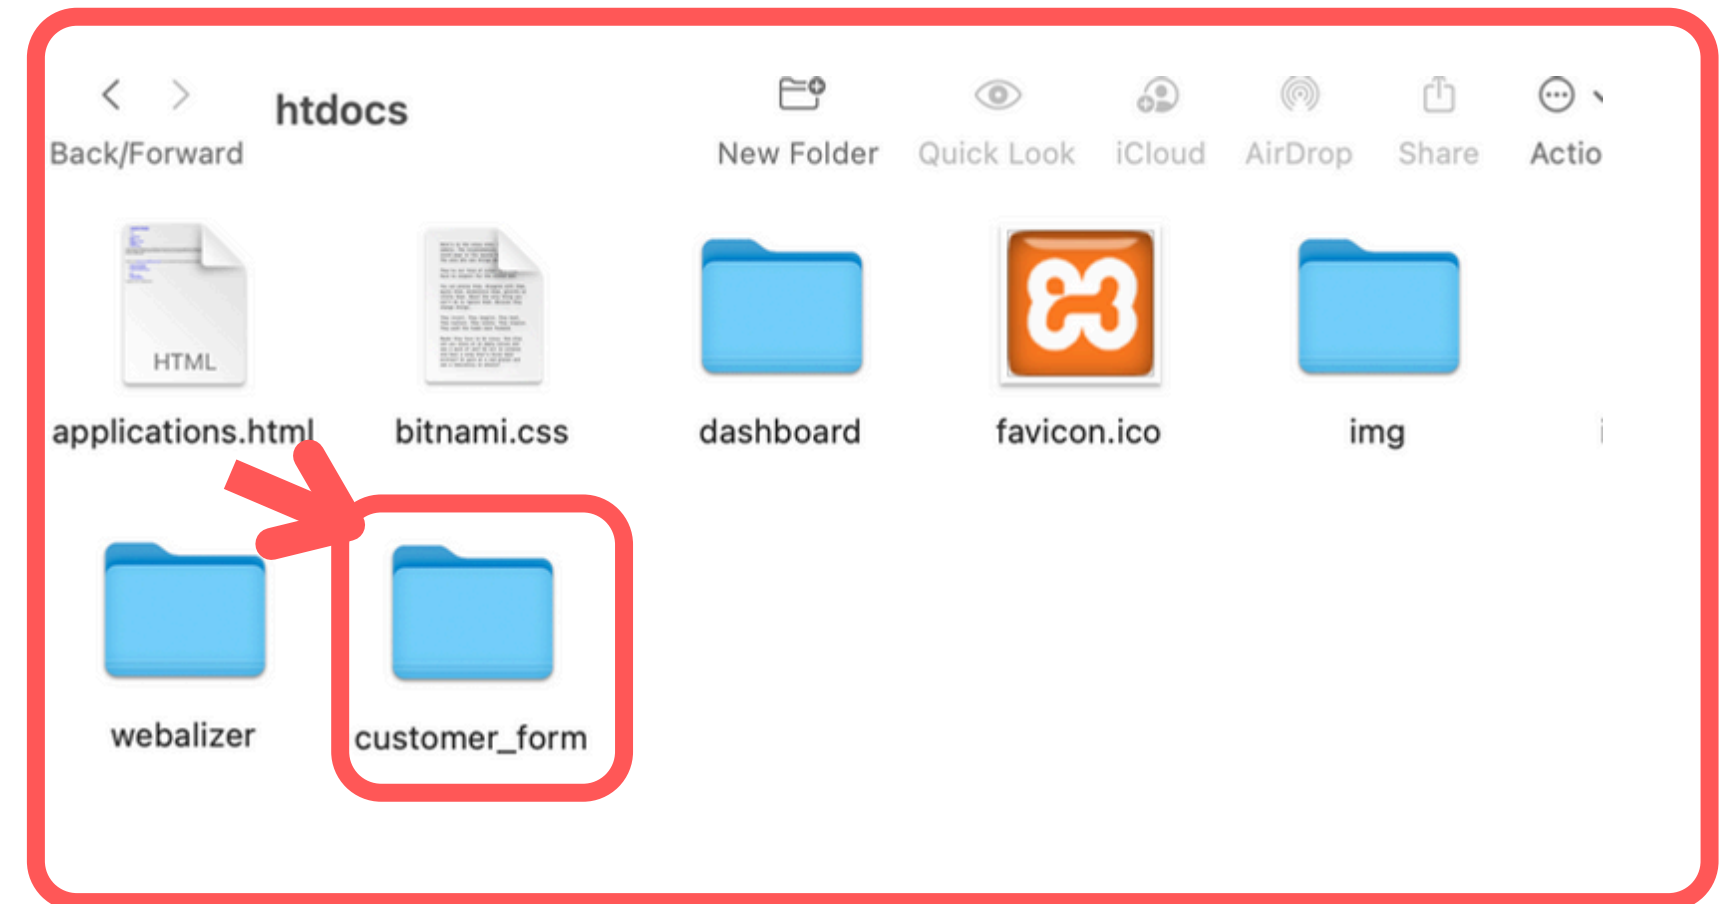

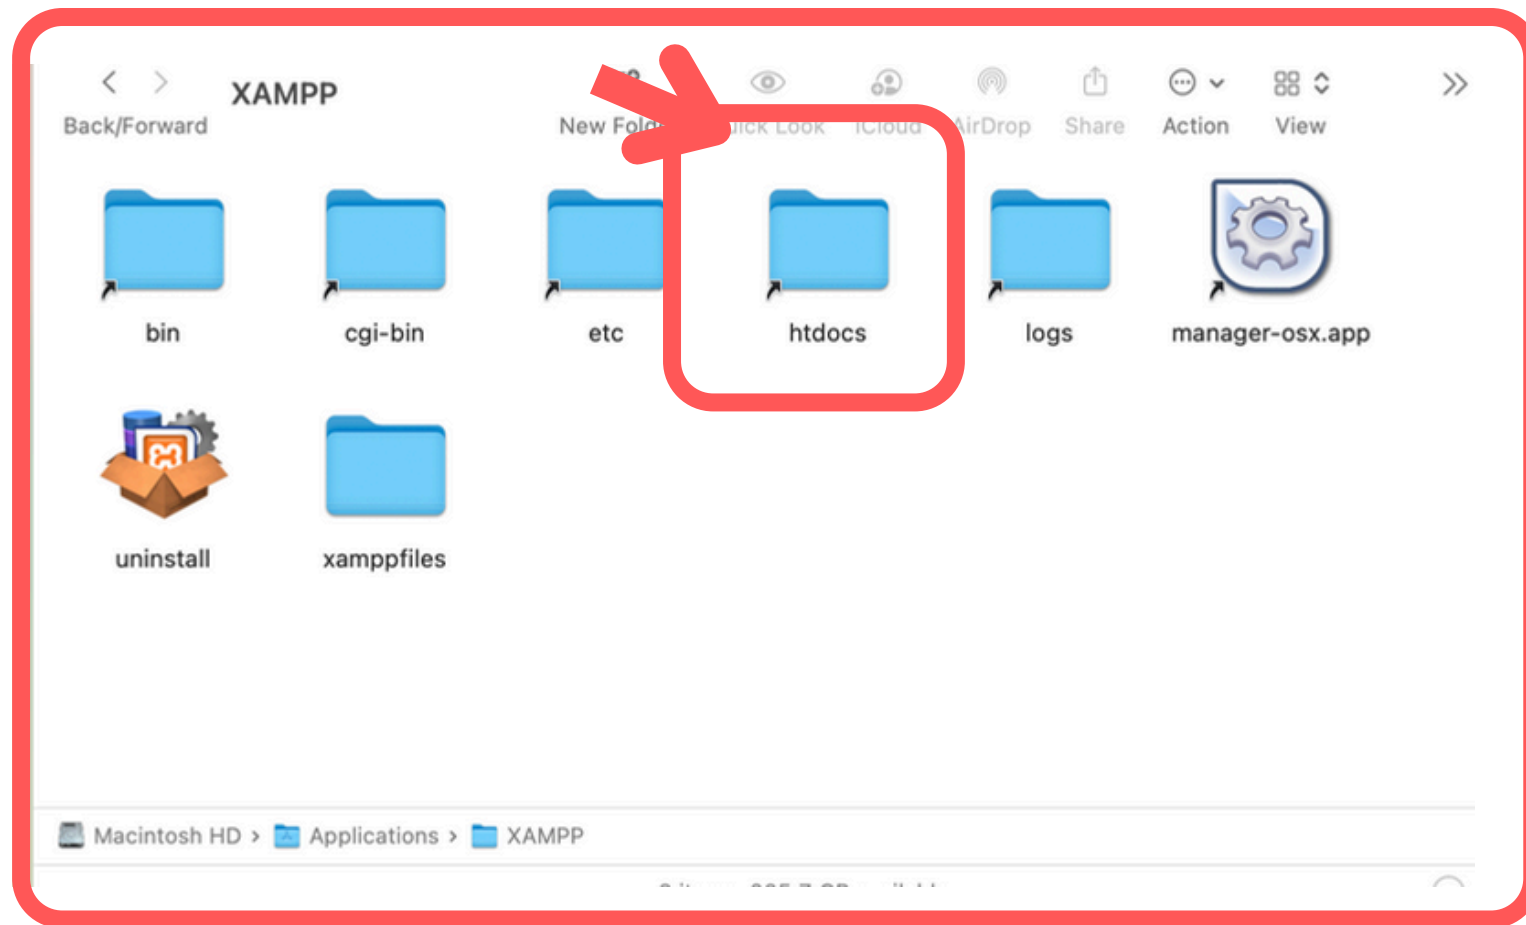

STEP 2.1: Go to Folder XAMPP

Go in “Applications” Folder -----> Click on ---> XAMPP

STEP 2.2: Go to htdocs

Go to htdocs folder---> Create Folder name---> customer_form

STEP 3: Create MySQL Database and Table

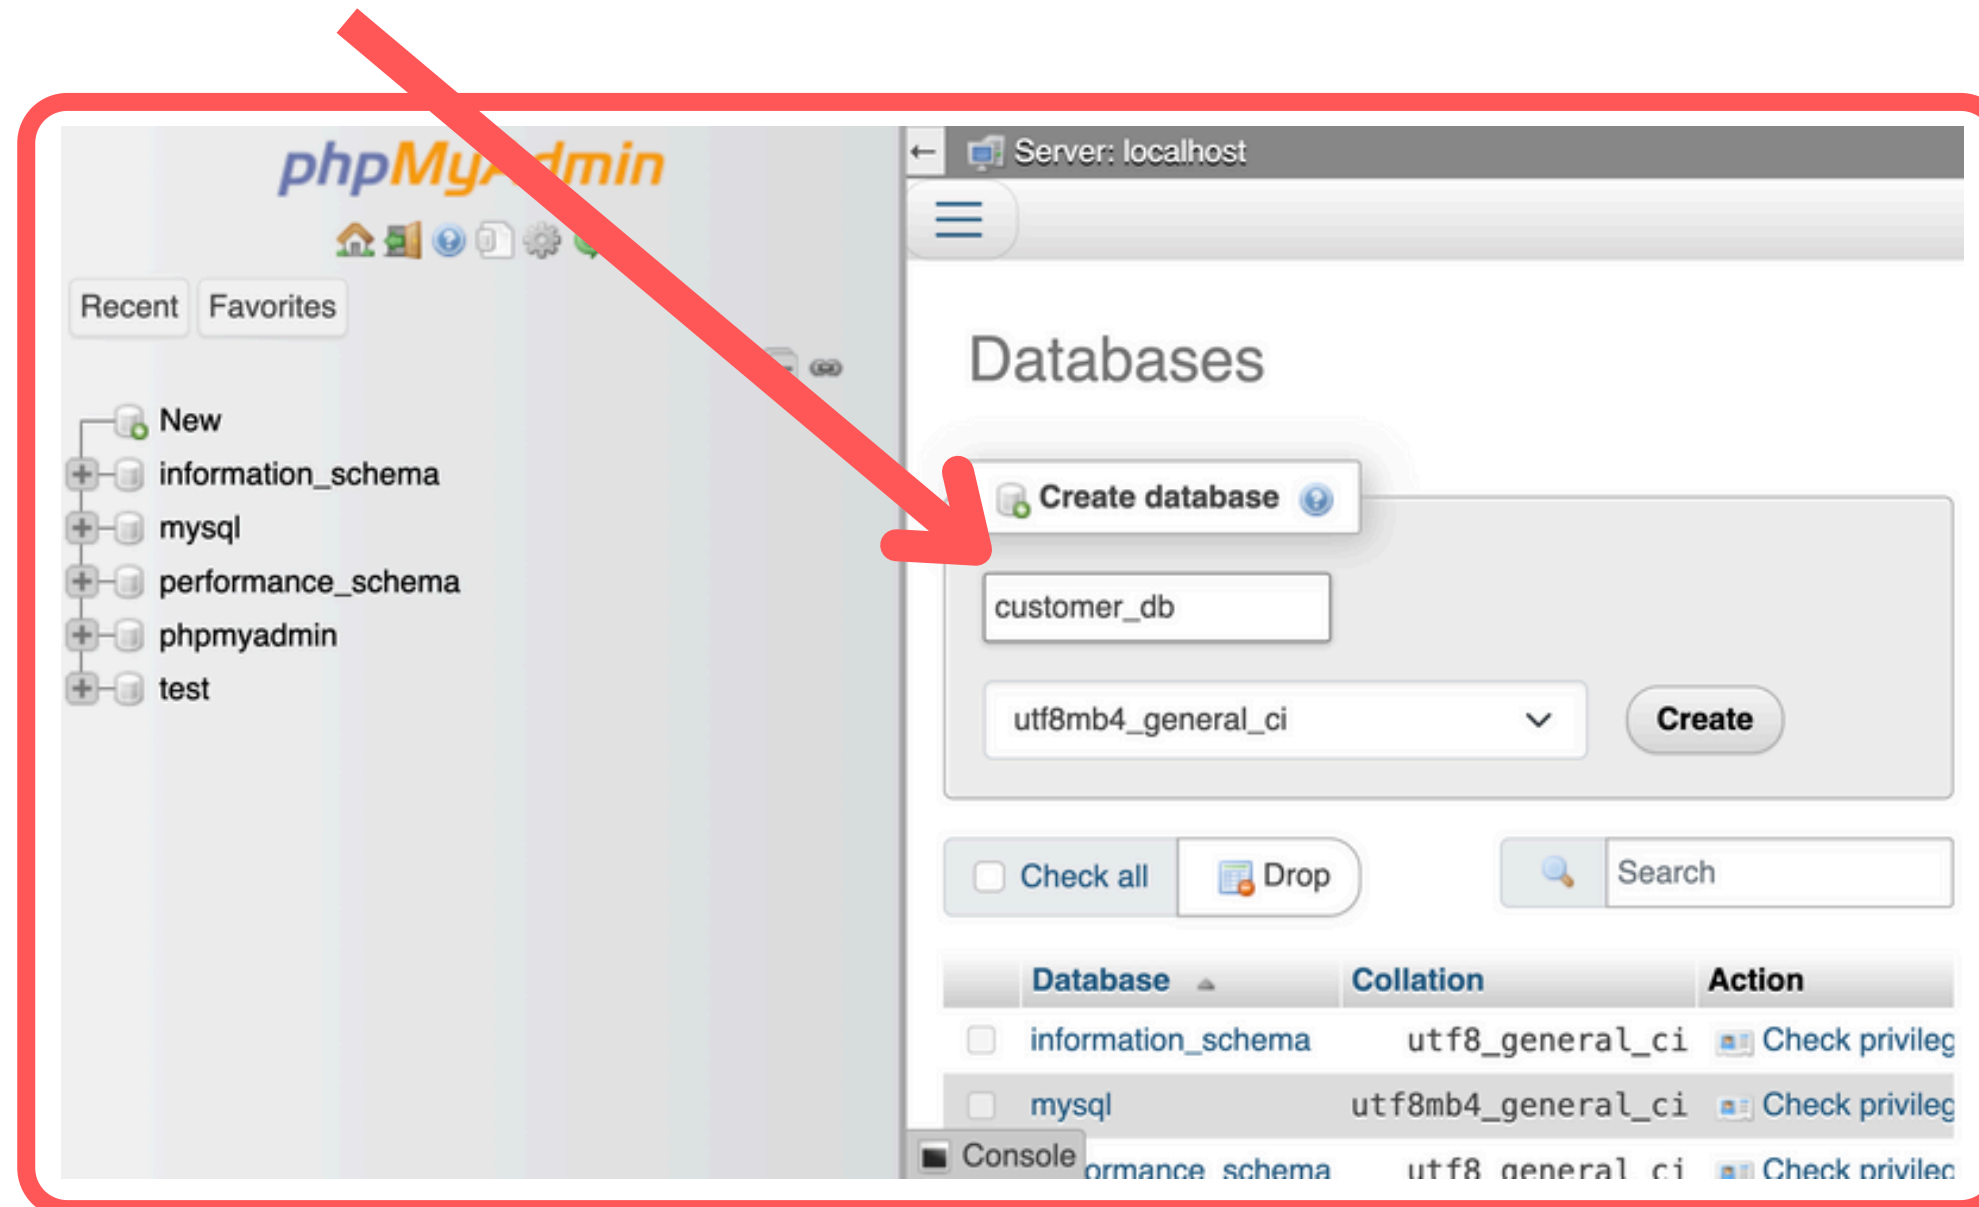

Open phpMyAdmin

In browser, go to: <http://localhost/phpmyadmin>

Click "Databases"

Type in database name:

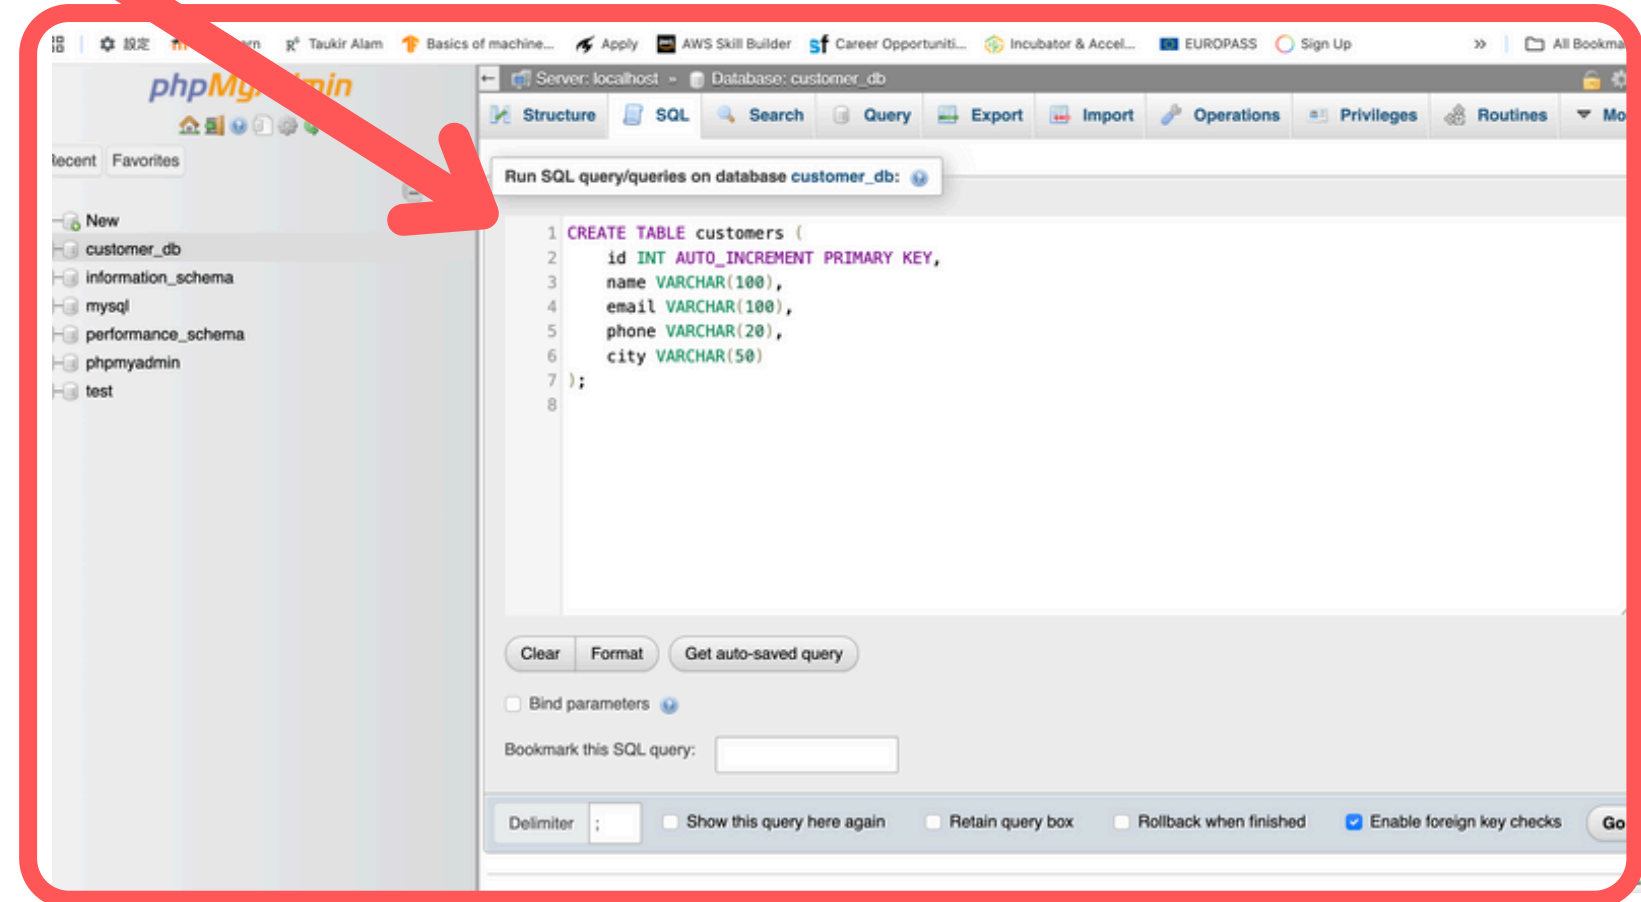

customer_db → Click "Create"

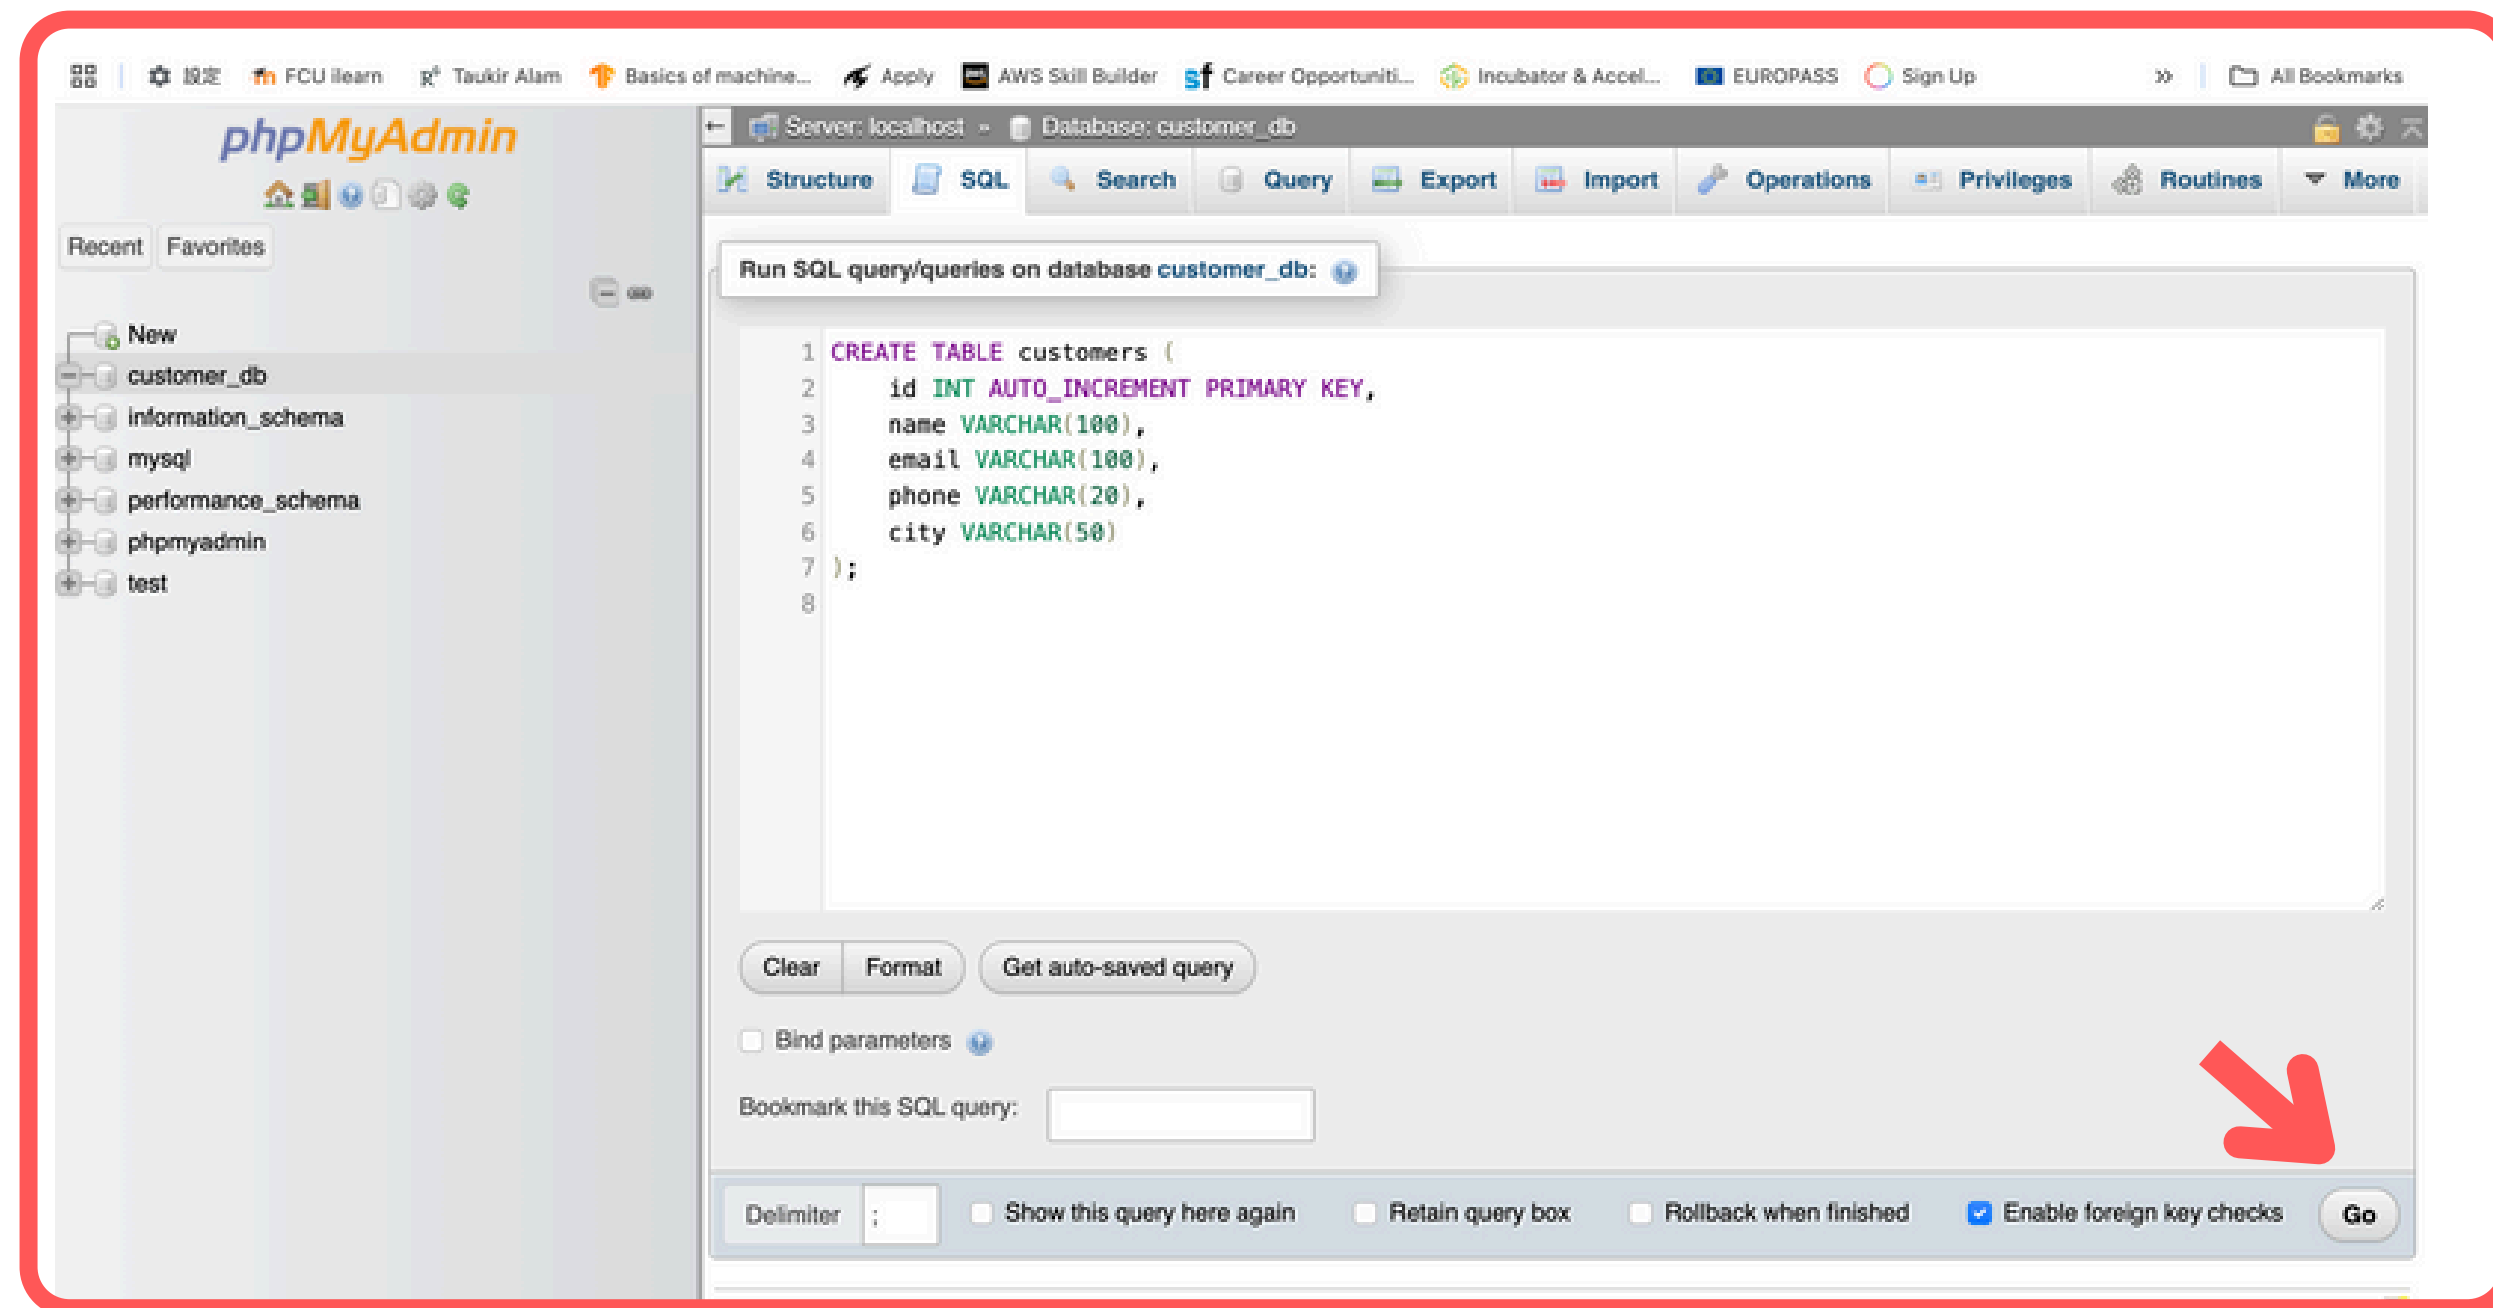

STEP 3.1: Paste the Code

Click on “SQL” ---> paste the code

```
CREATE TABLE customers (  
    id INT AUTO_INCREMENT PRIMARY KEY,  
    name VARCHAR(100),  
    email VARCHAR(100),  
    phone VARCHAR(20),  
    city VARCHAR(50)  
);
```

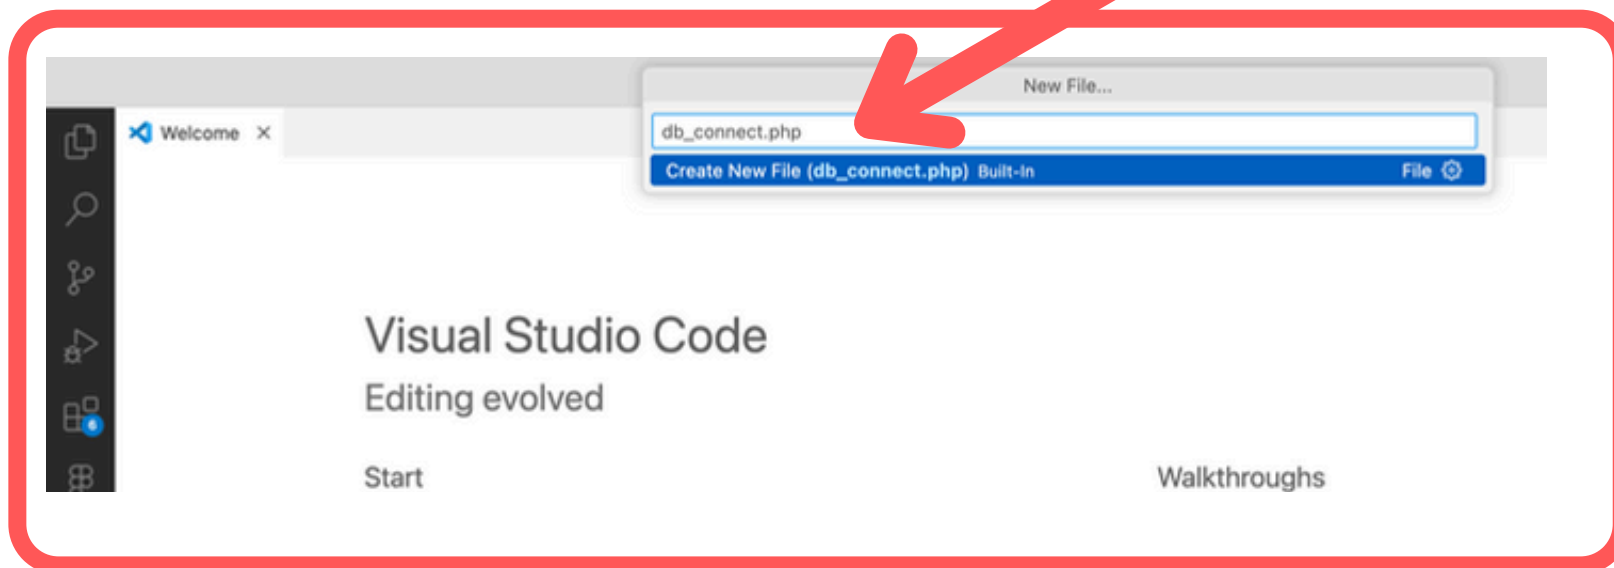

STEP 3.2: Click on “Go”

STEP 4: Connect PHP to the Database

Open VS Code create the file -->db_connect.php

```
db_connect.php X
Applications > XAMPP > xamppfiles >htdocs > customer_form > db_connect.php
1  <?php
2  $servername = "localhost";
3  $username = "root";
4  $password = "";
5  $database = "customer_db";
6
7  // Create connection
8  $conn = new mysqli($servername, $username, $password, $database);
9
10 // Check connection
11 if ($conn->connect_error) {
12     die("Connection failed: " . $conn->connect_error);
13 }
14 ?>
15
```

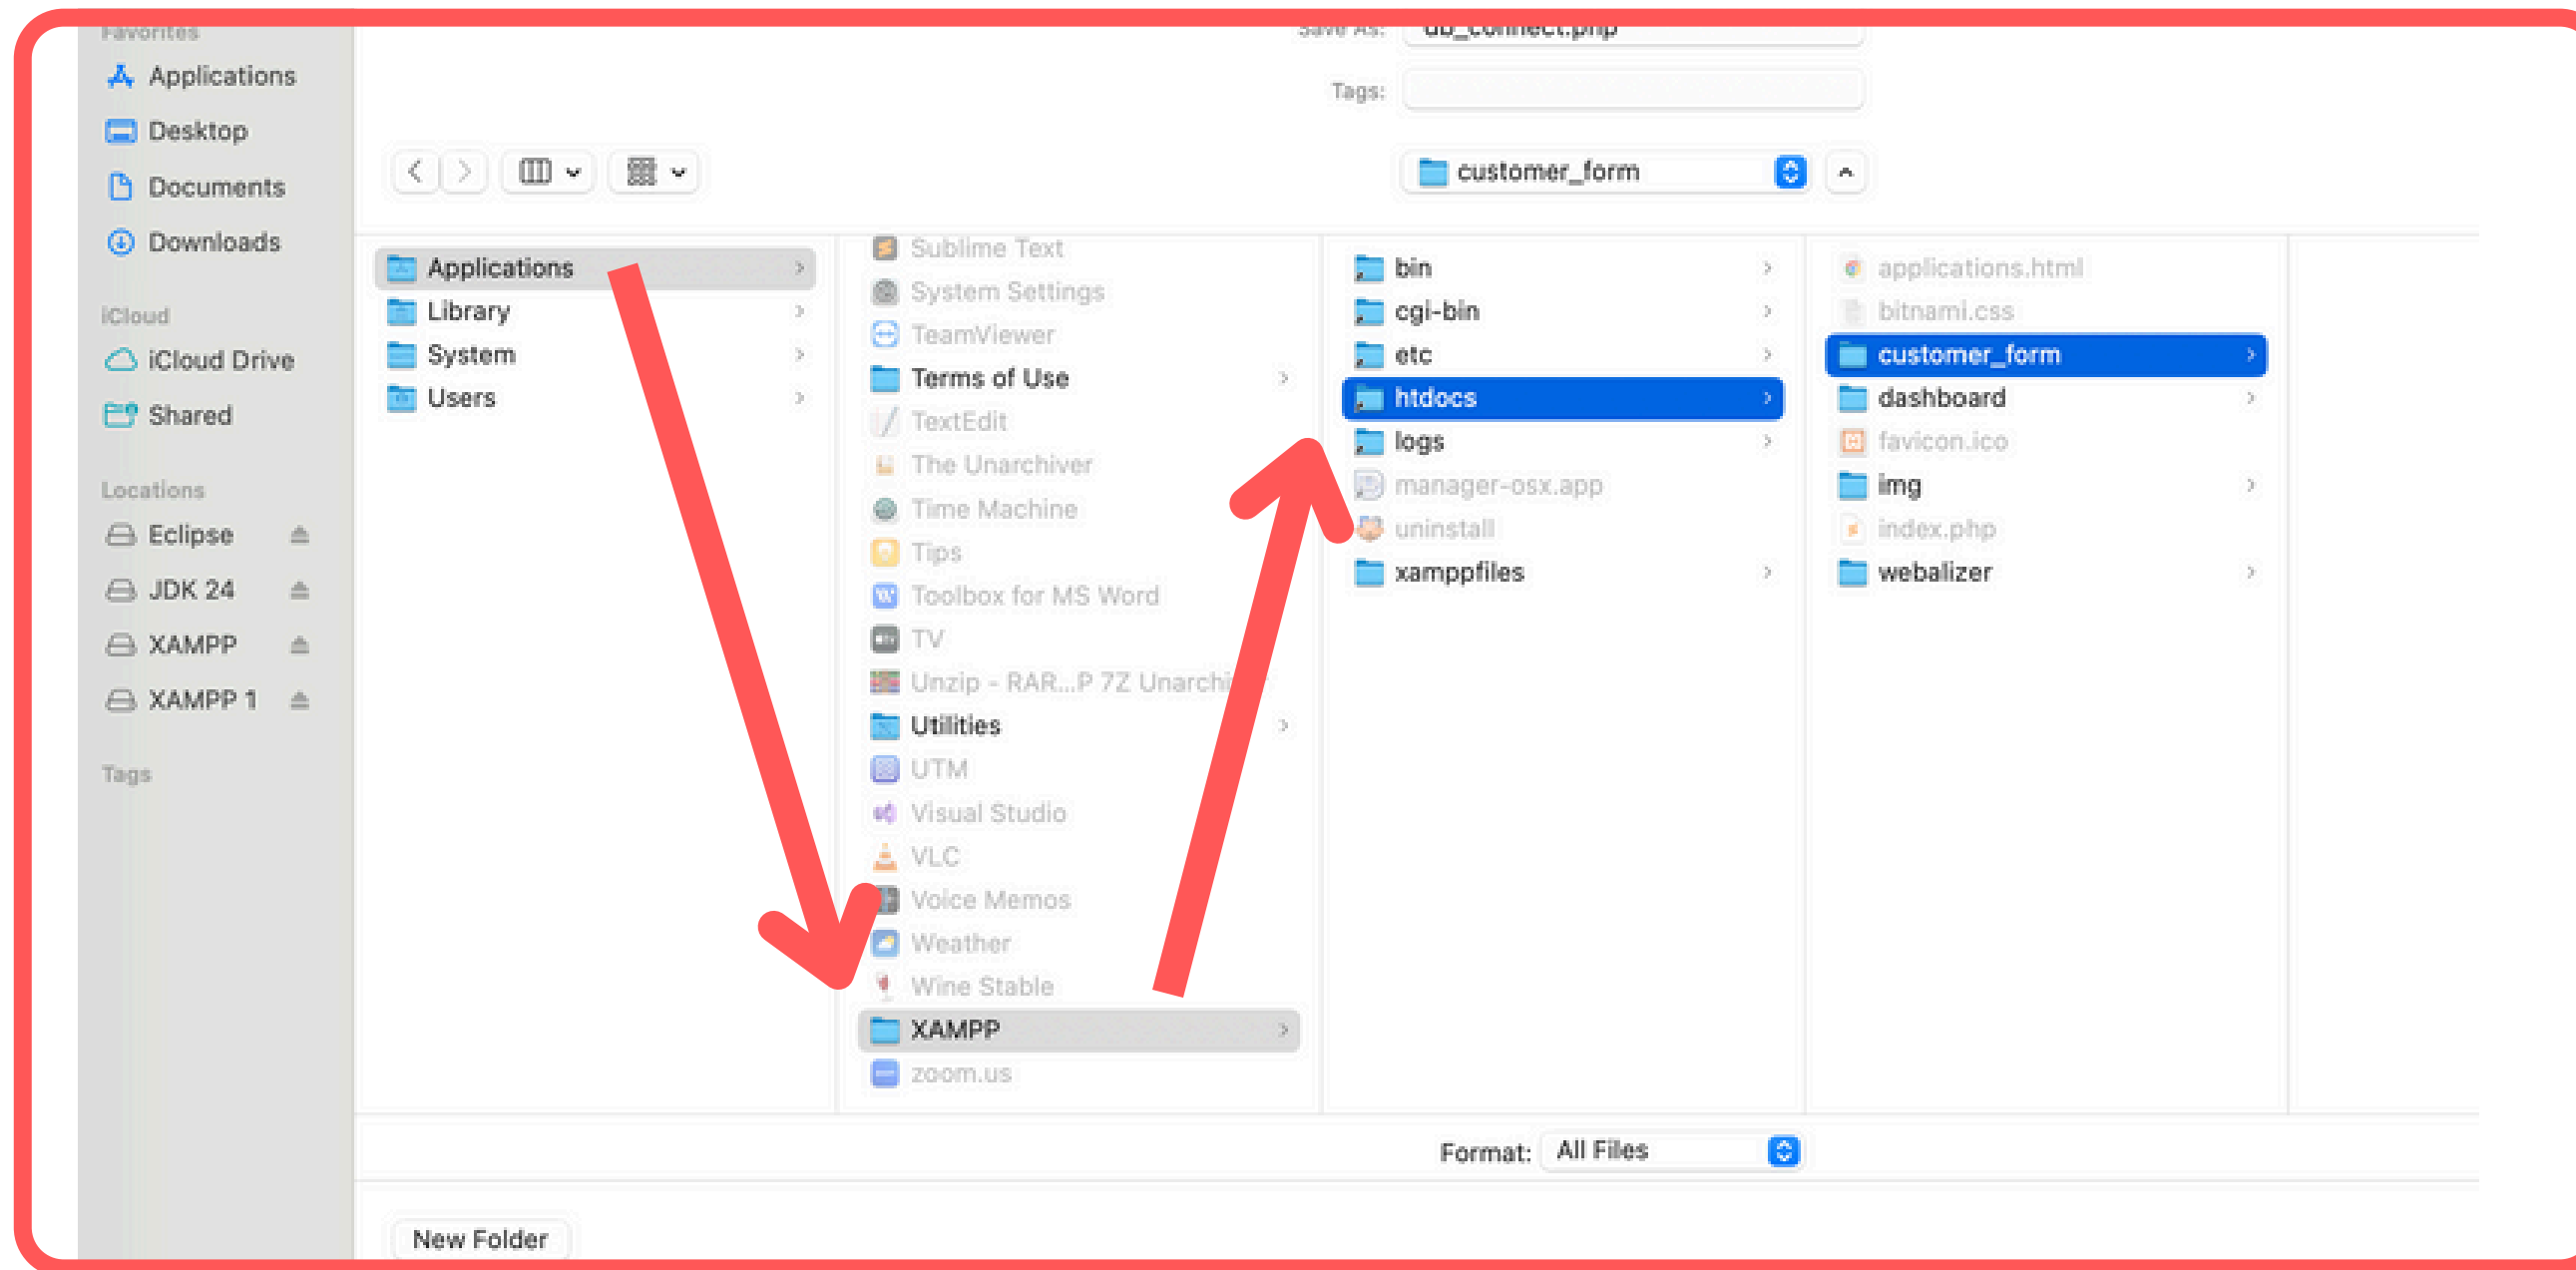

```
<?php
$servername = "localhost";
$username = "root";
$password = "";
$database = "customer_db";

// Create connection
$conn = new mysqli($servername, $username, $password, $database);

// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
?>
```

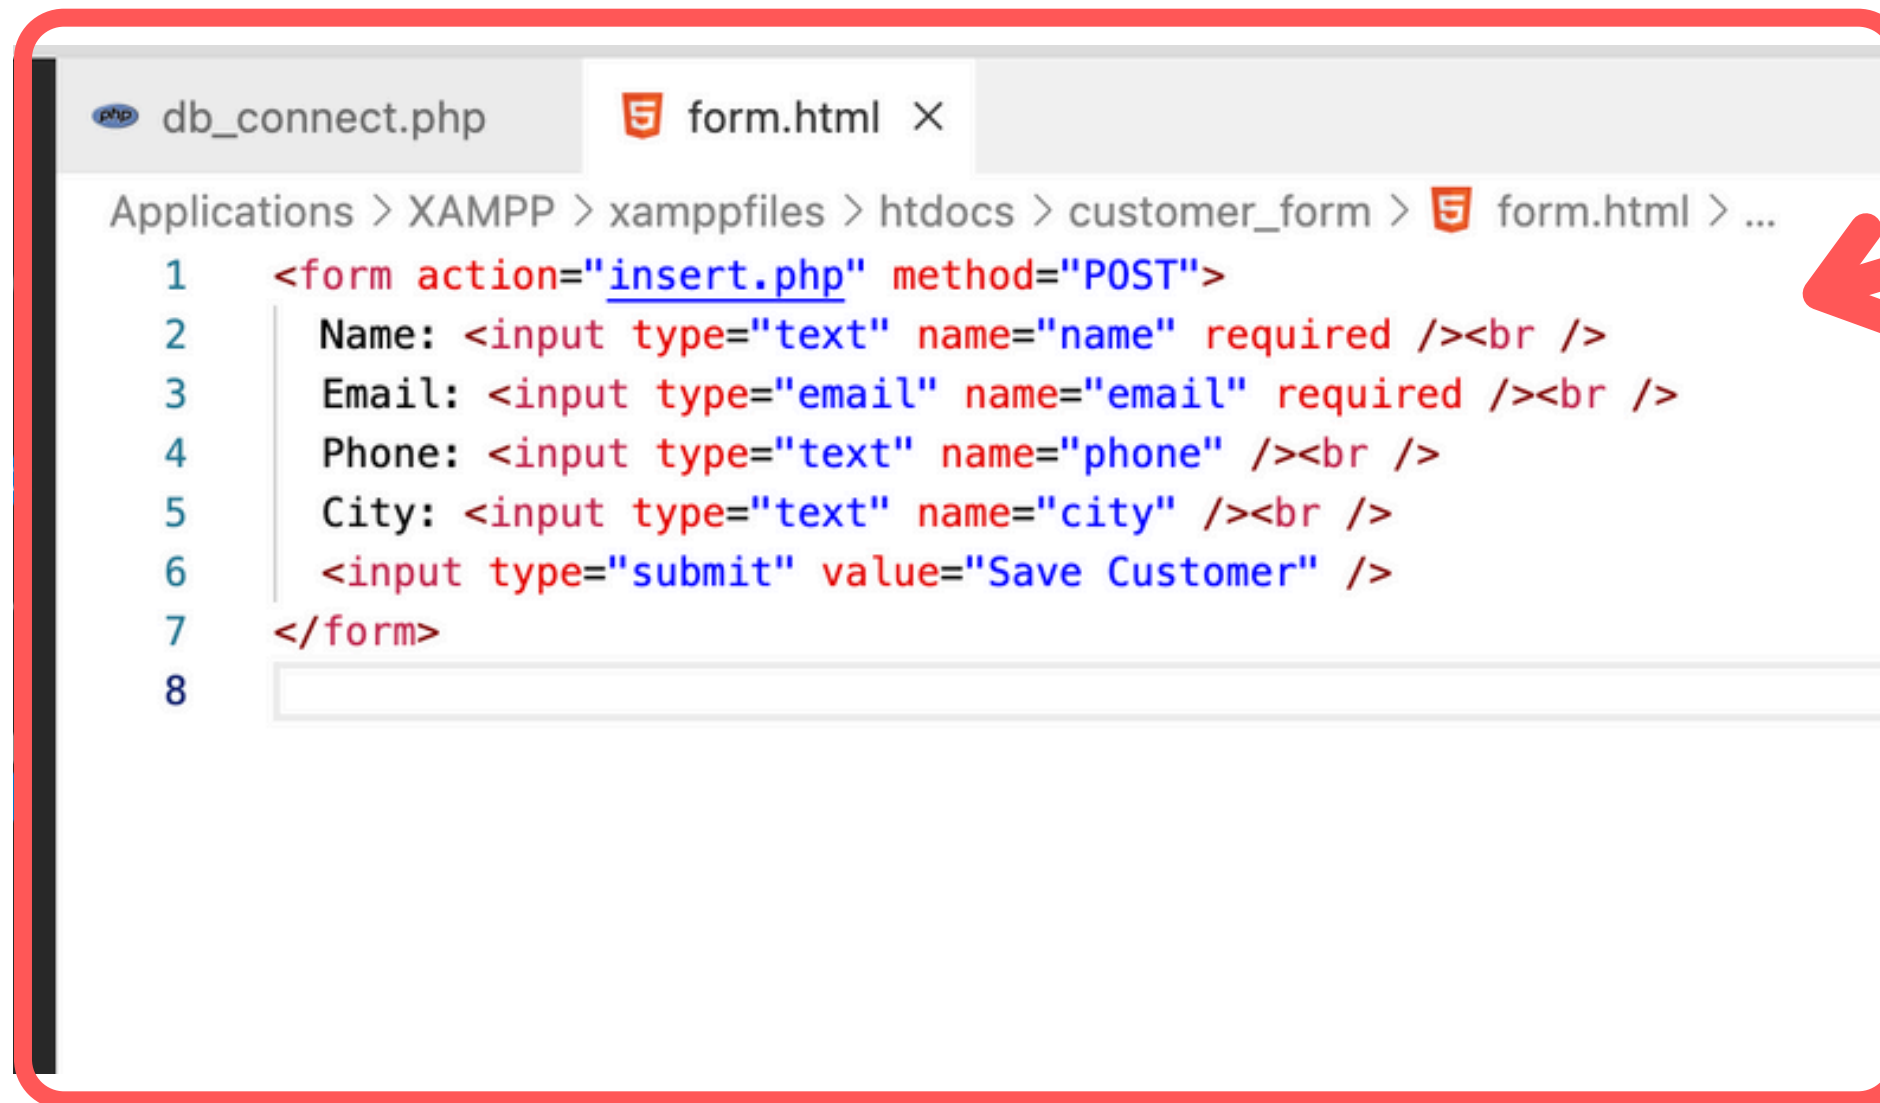

STEP 4.1: Finally Save the file

Create db_connect.php file & Save the File --->...xampp--->htdocs-->customer_form-->db_connect.php

STEP 5: Create the HTML Form

Create “form.html” file in VS code -->Save the File --->...xampp--->htdocs-->customer_form-->form.html

```
db_connect.php form.html X
Applications > XAMPP > xamppfiles > htdocs > customer_form > form.html > ...
1  <form action="insert.php" method="POST">
2    Name: <input type="text" name="name" required /><br />
3    Email: <input type="email" name="email" required /><br />
4    Phone: <input type="text" name="phone" /><br />
5    City: <input type="text" name="city" /><br />
6    <input type="submit" value="Save Customer" />
7  </form>
8
```

```
<form action="insert.php" method="POST">
  Name: <input type="text" name="name" required /><br />
  Email: <input type="email" name="email" required /><br />
  Phone: <input type="text" name="phone" /><br />
  City: <input type="text" name="city" /><br />
  <input type="submit" value="Save Customer" />
</form>
```

STEP 6: Handle Form Submission (Insert to DB)

Create “insert.php” file in VS code --> Save the File ---> ...xampp--->htdocs-->customer_form-->insert.php

```
Applications > XAMPP > xamppfiles > htdocs > customer_form > insert.php
1  <?php
2  include 'db_connect.php';
3
4  $name = $_POST['name'];
5  $email = $_POST['email'];
6  $phone = $_POST['phone'];
7  $city = $_POST['city'];
8
9  $sql = "INSERT INTO customers (name, email, phone, city)
10         VALUES ('$name', '$email', '$phone', '$city')";
11
12  if ($conn->query($sql) === TRUE) {
13      echo "Customer saved successfully!";
14  } else {
15      echo "Error: " . $conn->error;
16  }
17
18  $conn->close();
19  ?>
20
```

```
<?php
include 'db_connect.php';

$name = $_POST['name'];
$email = $_POST['email'];
$phone = $_POST['phone'];
$city = $_POST['city'];

$sql = "INSERT INTO customers (name, email, phone, city)
        VALUES ('$name', '$email', '$phone', '$city')";

if ($conn->query($sql) === TRUE) {
    echo "Customer saved successfully!";
} else {
    echo "Error: " . $conn->error;
}

$conn->close();
?>
```

STEP 7: View Customers (Optional)

Create “view.php” file in VS code -->Save the File --->...xampp--->htdocs-->customer_form-->view.php

```
<?php
include 'db_connect.php';

$sql = "SELECT * FROM customers";
$result = $conn->query($sql);

echo "<h2>Customer List</h2>";
echo "<table border='1'>";
echo "<tr><th>ID</th><th>Name</th><th>Email</th><th>Phone</th><th>City</th></tr>";

while($row = $result->fetch_assoc()) {
    echo "<tr>
        <td>{$row['id']}</td>
        <td>{$row['name']}</td>
        <td>{$row['email']}</td>
        <td>{$row['phone']}</td>
        <td>{$row['city']}</td>
    </tr>";
}
echo "</table>";

$conn->close();
?>
```

```
<?php
include 'db_connect.php';

$sql = "SELECT * FROM customers";
$result = $conn->query($sql);

echo "<h2>Customer List</h2>";
echo "<table border='1'>";
echo "<tr><th>ID</th><th>Name</th><th>Email</th><th>Phone</th><th>City</th></tr>";

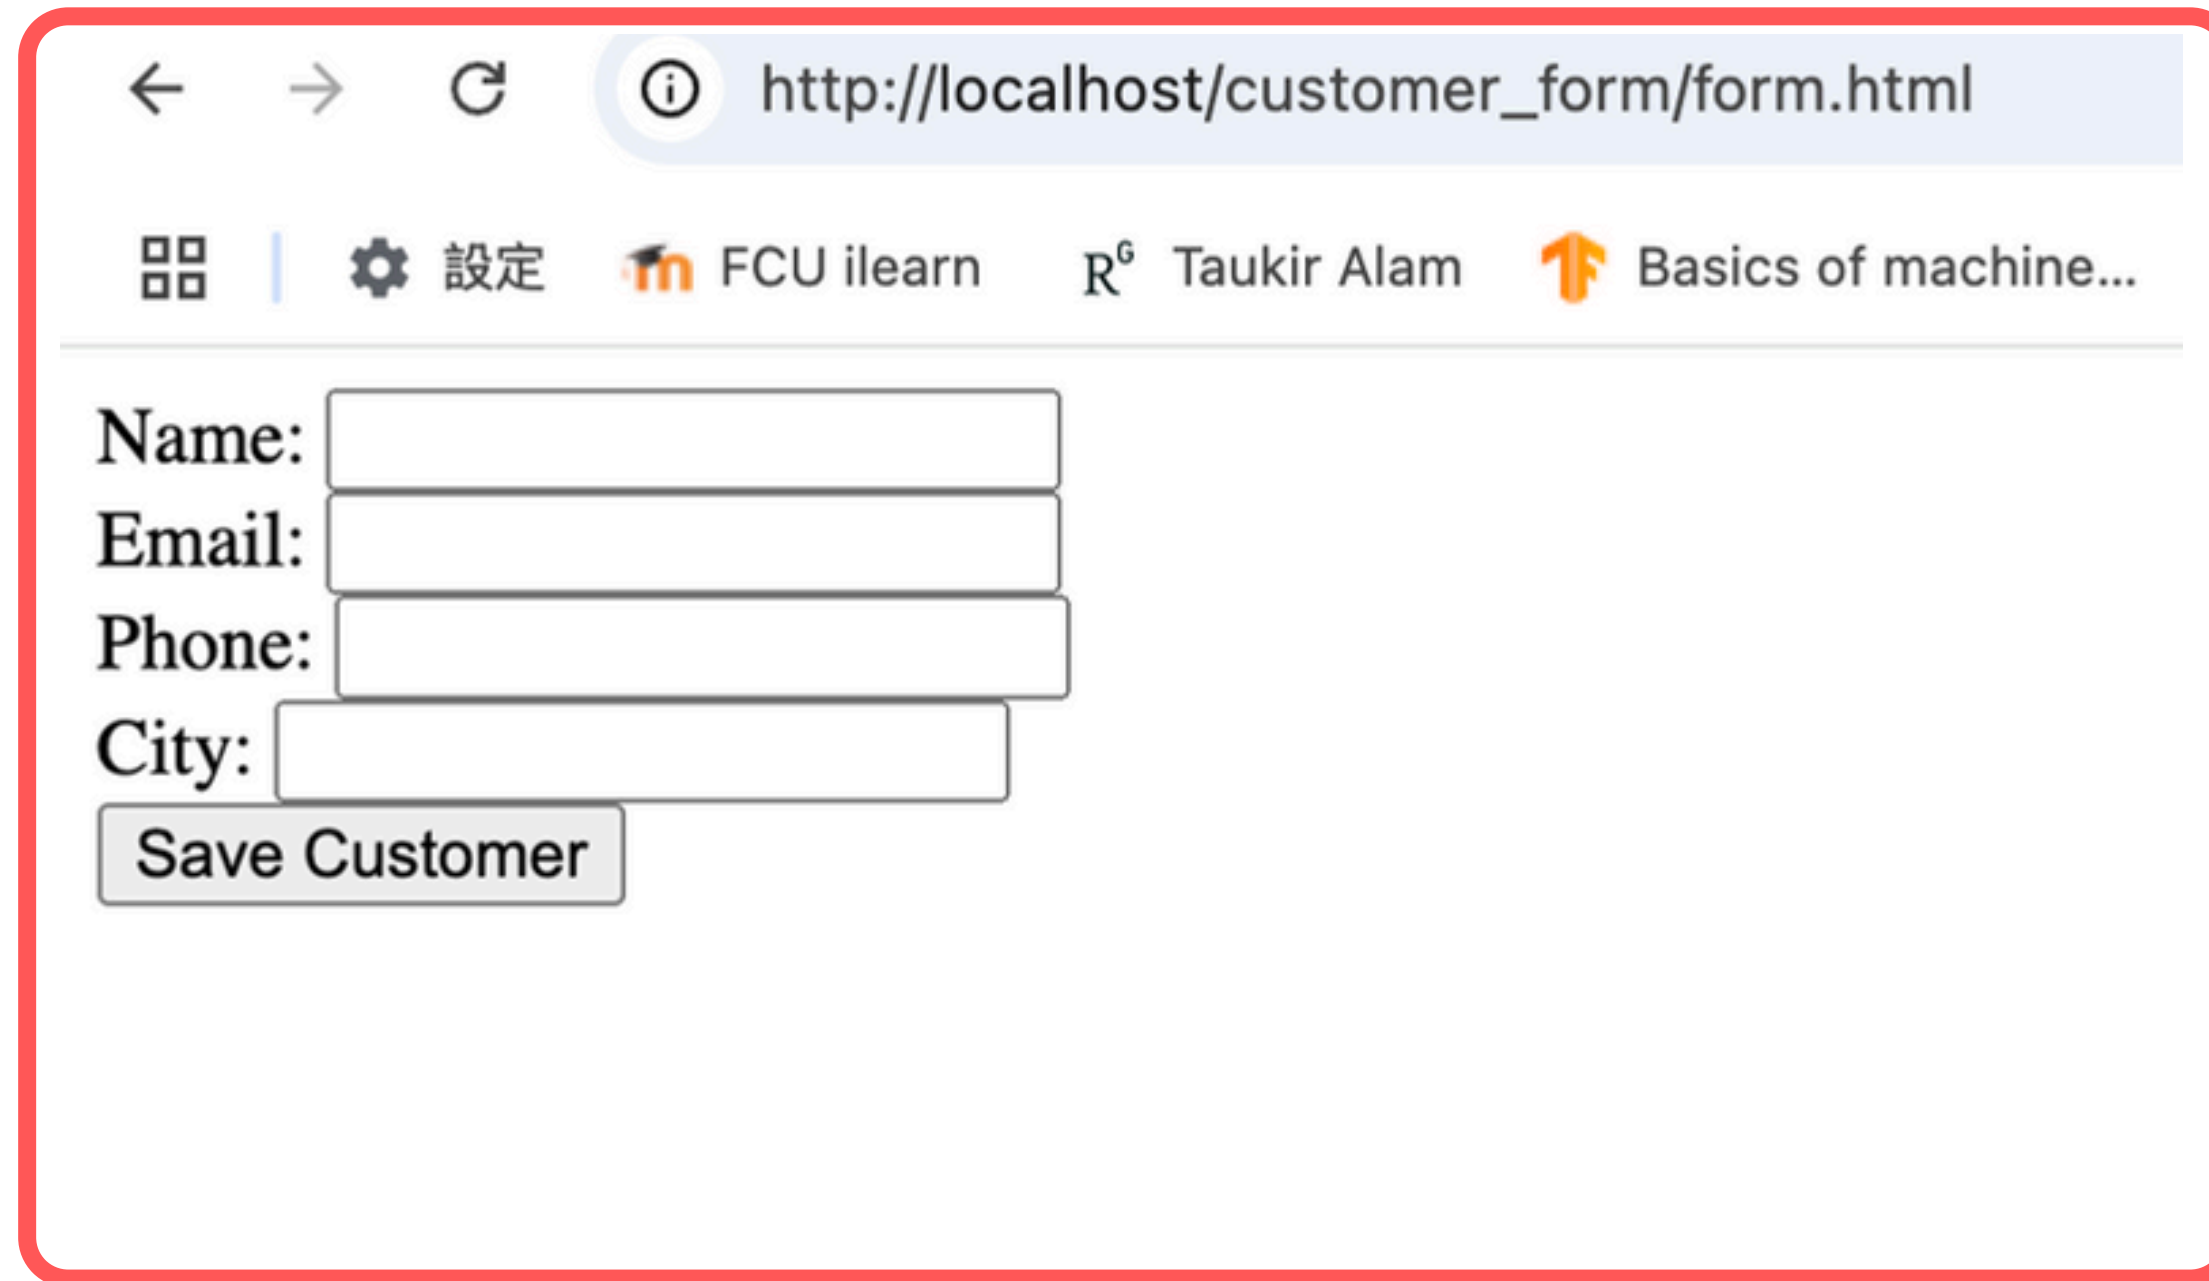

while($row = $result->fetch_assoc()) {
    echo "<tr>
        <td>{$row['id']}</td>
        <td>{$row['name']}</td>
        <td>{$row['email']}</td>
        <td>{$row['phone']}</td>
        <td>{$row['city']}</td>
    </tr>";
}
echo "</table>";

$conn->close();
?>
```

STEP 8: Save the data

Go to : http://localhost/customer_form/form.html

A screenshot of a web browser window. The address bar shows the URL http://localhost/customer_form/form.html. The browser's tab bar shows several tabs: a settings tab labeled '設定', a tab with the FCU ilearn logo, a tab for 'R⁶ Taukir Alam', and a partially visible tab for 'Basics of machine...'. The main content area displays a form with four input fields labeled 'Name:', 'Email:', 'Phone:', and 'City:'. Below these fields is a button labeled 'Save Customer'.

Customer saved successfully!

Fill the form and Save
